

# STUN GUNS

Self defense is really important especially when in a survival situation. Using a non lethal self defense weapon is an effective way to protect your family and yourself against an attacker. One of the most popular and effective self defense weapons today is the stun gun.

### **How do they work?**

The stun guns are so effective because their output interferes with the communication between the brain and muscular system causing a loss of balance and disorientation of the target. This cycle is momentary and allows for the victim to seek help or flee the area of danger because the target most likely won't be able to walk much less run after you.

### **What Type of Voltage a Stun Gun can generate**

Stun guns are potentially dangerous devices; by having a stun gun a person can be able to neutralize any type of target without the risk of killing. A stun gun carries between 20,000 and 150,000 volts with an effective range of 15 to 20 ft.

### **What difference does the voltage make?**

Generally, the higher the voltage, the quicker the full effect of the stun gun, thus more effective. Besides voltage, the delivery method and the amperage of the charge are also important. A lower voltage stun gun with a better method of delivery may be more effective then the stun gun with higher voltage.

### **Can I travel with a stun gun?**

When traveling, stun guns should be packed in CHECKED luggage only. They are not allowed in terminal areas of any airport, or in any carry-on luggage. Never attempt to enter a courthouse, government building, public meeting, or sporting event area with a stun device.

## **Do We Need To Register Our Stun Guns With Any State Agency ?**

No, because they are Not considered to be firearms. But please refer to the STATE LAWS tab on our website to learn more about the possible regulations of your state.

## **Can They Be Used On Animals?**

These devices are not meant to used on animals but we have found out that some people have used them to “scare” the animals away because of the crackling noise they make.

## **If The Aggressor Is Touching Me Will I Be Zapped?**

No! Even if the aggressor is physically touching you when you fire the stun gun into them you cannot suffer from a charge back!

## **Can a stun gun be fired multiple times?**

Yes. With a fresh charge a stun gun can be fired many, many times. This makes a stun gun an excellent choice for defending yourself against multiple assailants

## **Stun Guns vs. Tasers?**

Stun Guns are commonly miscalled “takers” Tasers have the projectile wires and darts that are generally used by domestic law enforcement . Tasers are now available for sale to the general public! Stun Guns, traditionally and statistically, are designed for REAL LIFE ASSAULTS that happen up-close and are also designed to stop vicious animal attacks.

## **How Fast Can The Gun Reload?**

A Stun Gun Should comfortably fits into the hands. This is a very important factor because the length of time when stun gun is in direct contact with your attacker will make a difference in their reaction. The longer the contact, the more disabling the effects will be. One must select the device that will not slip easily from the fingers, preferably with a rubberized grip or choose one that will be difficult to pry away.

## **Ultra-Sharp Spike Electrodes Help Penetrate Through Thick Clothing?**

It's also very dangerous on thick clothing, its ultra-sharp spike electrodes can effectively penetrate through thick clothing with ease. It features a powerful system that guarantees you optimum protection from your enemies and applies and feels same shock like on normal behaviors clothing.

## **Are The Batteries Rechargeable?**

The newest and latest in stun gun technology, rechargeable stun guns will eliminate the need for unnecessary replacement of batteries. It is always ready to use. These rechargeable stun guns will keep its users a safe distance from attacker, while giving the option to defend themselves by enabling the powerful alarm. At \$6.00 to \$10.00 every time a battery change is needed, rechargeable stun gun also safe money for its user by eliminating the worries of replacement batteries.

## **Warranty?**

Nowadays in the market stun gun is made for a long lasting period, generally many manufacturers of stun guns offer a life time warranty, that works for a long time, with a same power generator.

## **How far can stay in order to keep a safe distance?**

A Stun Gun can attack its target maximum up to 15ft from its surrounding a person can secure themselves to reach out from its range.

## **Government and Laws**

A very first step for stun gun users that they have to read and understand the legal and government policies of their regions, like in US many states have imposed a ban on the use of stun gun.

## **Are There any after effects?**

There are no side effects . Once the the target is hit , it stays momentarily dazed. The short and low amperage don't cause any permanent damage to the muscles ,nerves or body functions. Even more they don't cause any interruptions to the heartbeat or damage to a pacemaker device.

### **Which Type Should I Buy?**

Well it all depends on your personal preference ,size ,color and budget. Most people prefer the ones that are shaped as guns because they are easy to hold.

There it is I hope this report was helpful .
